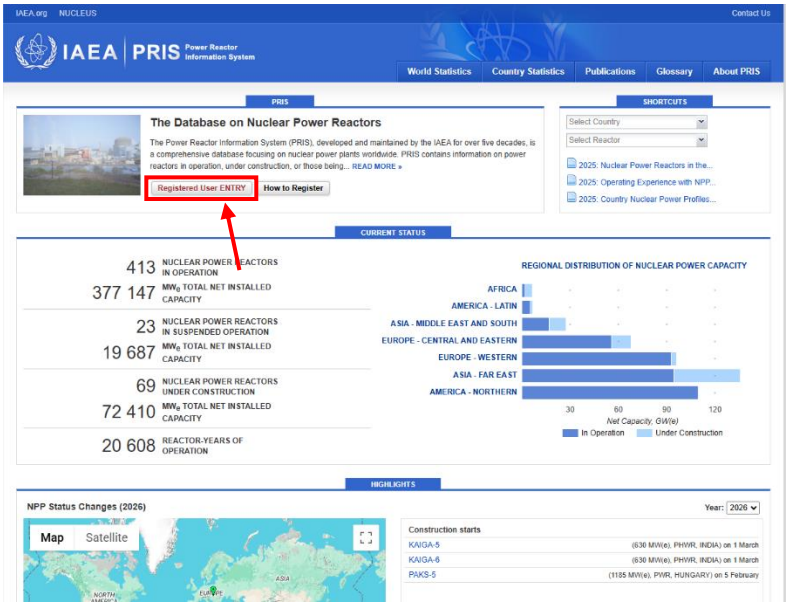
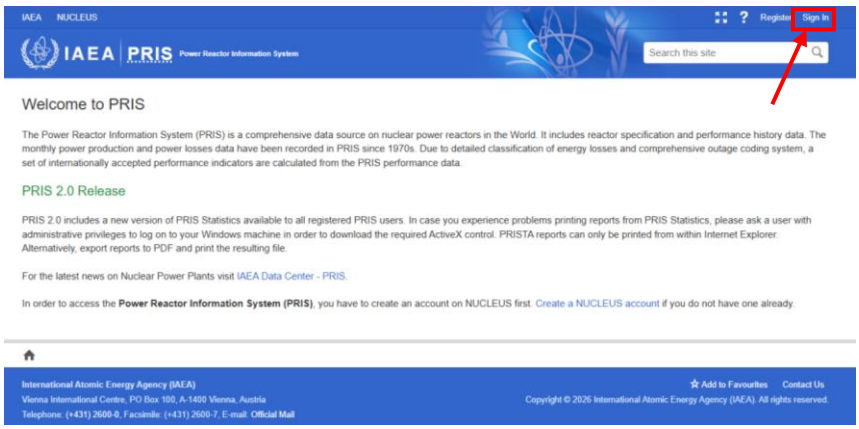
Download reactor data from PRIS database

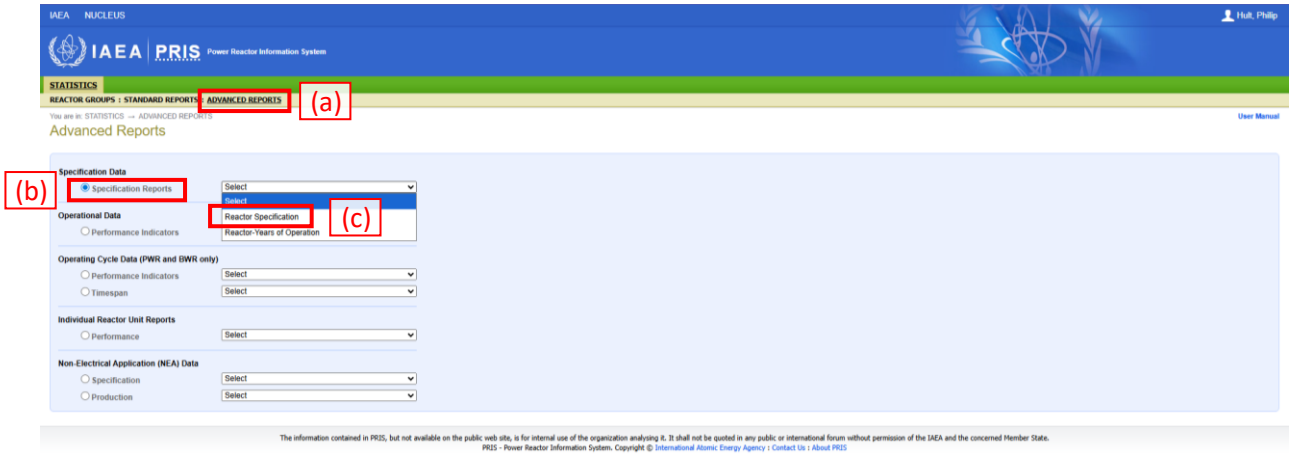
1) Go to PRIS – Power Reactor Information System.
2) Click on *Registered User ENTRY*



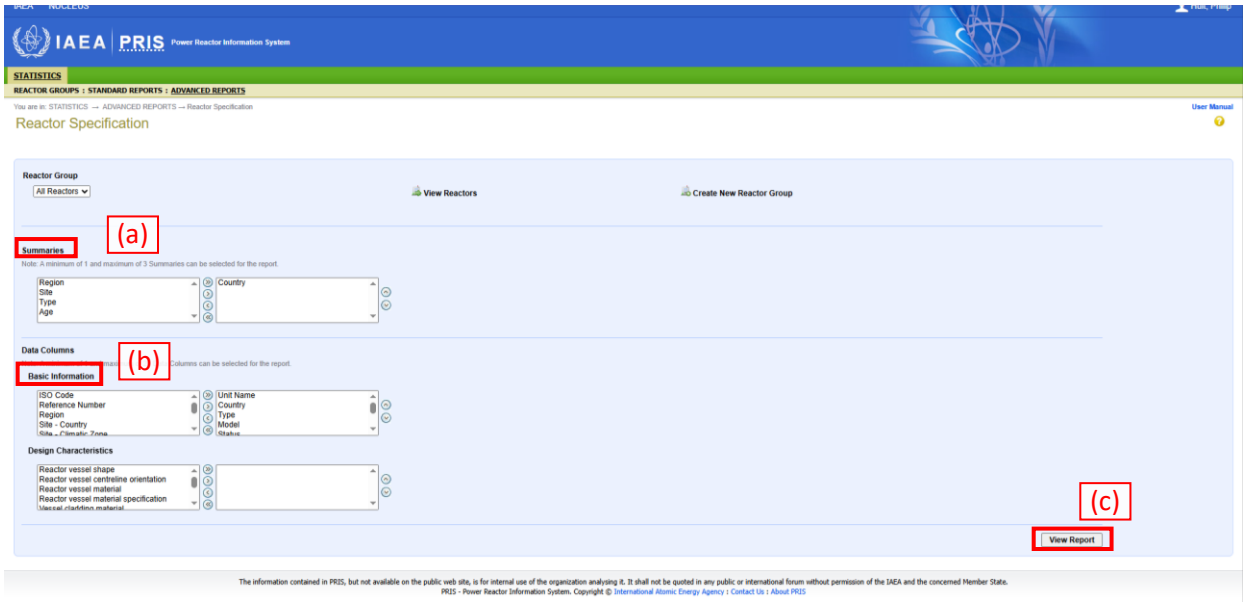
3) Sign in to NUCLEUS first with the available credentials.



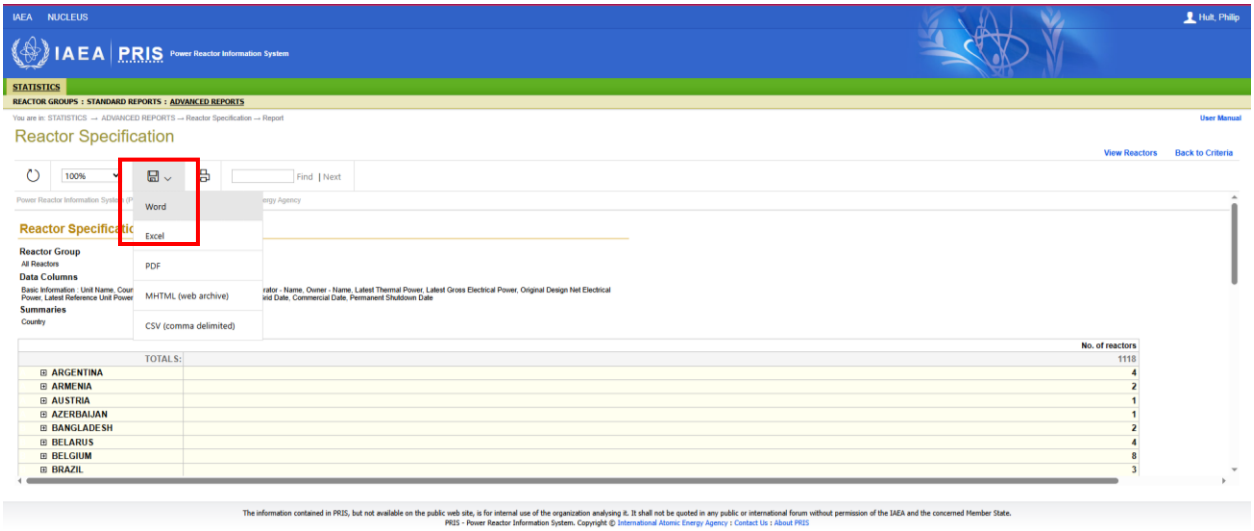
4) Once the logged in, you will be redirected to the user interface to retrieve the information of interest.
   a) Go to *Advanced reports*
   b) Click on *Specification Reports*
   c) In the dropdown menu of *Specification Reports*, select *Reactor Specification*.



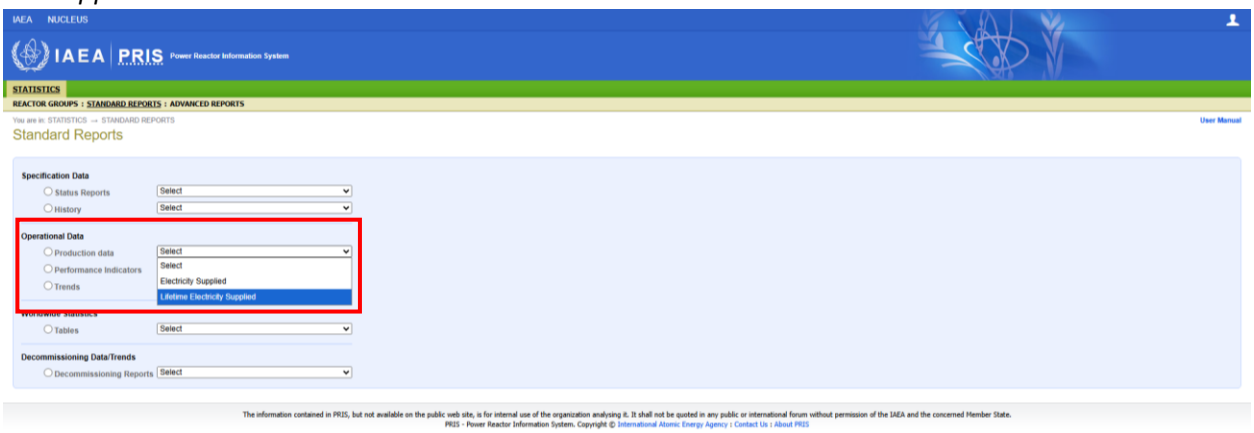
5) Before proceeding with the data download:
   a) Select *Country* from the list in *Summaries*.
   b) Select the following tags from the list under *Basic Information*: *Unit Name, Country, Type, Model, Status, Site – Name, Operator – Name, Owner – Name, Latest Thermal Power, Latest Gross Electrical Power, Original Desing Net Electrical Power, Latest Reference Unit Power(net), Construction Date, Criticality Date, Grid Date, Commercial Date, Permanent Shutdown Date.*
   c) Click on *View Report*.



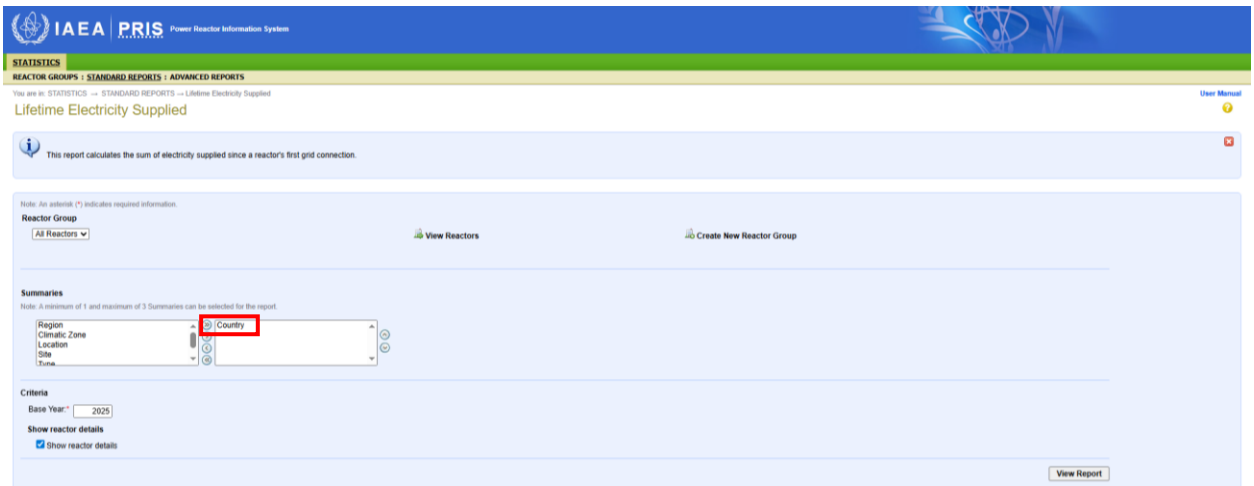
6) Download the Excel file



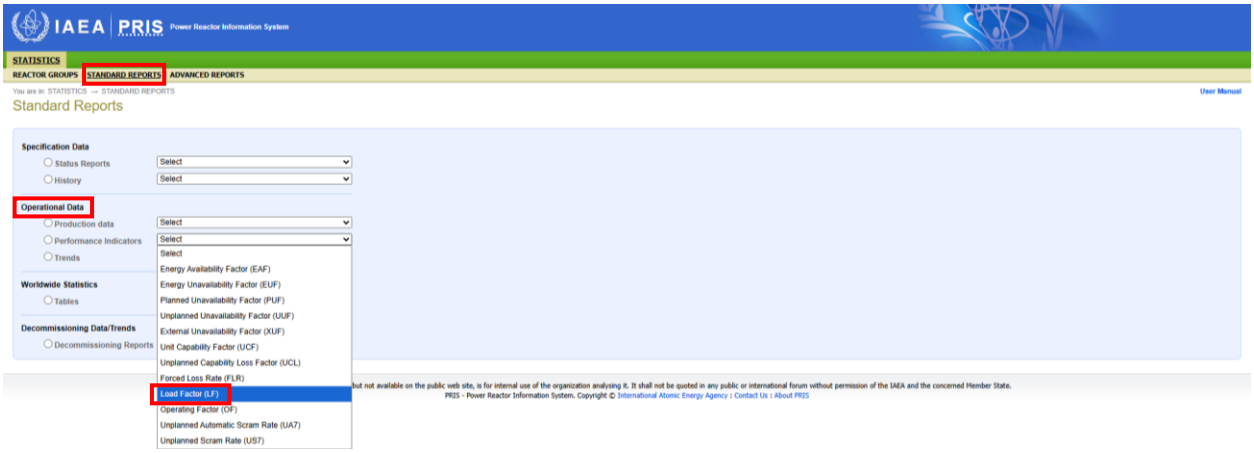
7) Go to *Standard Reports* and in the *Operational Data* → *Production data* select *Lifetime Electricity Supplied.*

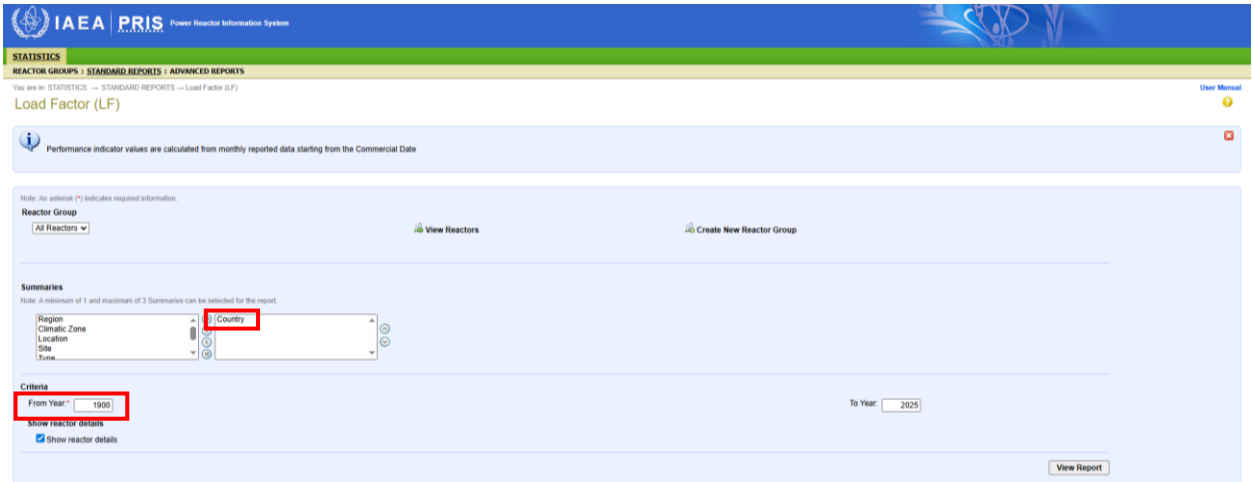


8) In *Summaries*, select *Country.* Subsequently, click on *View* report and save the report as an Excel file.



9) Go back to *Standard Reports* and in *Operational Data* → *Performance Indicators* select *Load Factor (LF).*





10) In *Summaries*, select *Country* and then change the *From Year* to 1900. Subsequently, click on *View* report and save the file as an Excel file.
